

## Industrial digital printing machine made in Austria

You can't find the perfect printer for you? We'd love to help! We are very proud to be able to respond to the individual requests of our customers and we always make sure to produce the ideal product for you. Since we are designing and producing everything in Austria, we are extremely flexible and can adjust our printer to your needs, e.g. custom pallets, software updates or help you with your online shop integration.

## aeoon PTB Series - Highspeed pretreatment solution for industrial mass production

With our maximum belt speed of up to ten meters per minute you are able to pretreat about 930 t-shirts per hour. And the best thing: Applying the pretreatment before printing does not slow down your printer either.

The PTB is extremely easy to use. Our integrated touchscreen and other helpful features make your life easier, for example, the automatic fluid change or the integrated cleaning system.

**The correct pretreatment is an essential step of the digital direct to garment printing process. It enables you to...**

- ... enhance saturation and sharpness to your prints on all colors and
- ... print with white ink, which is necessary to print on dark garments

Once you master the process of digital printing with our aeoon products, you will be able to print textiles with excellent quality at an extremely high speed. We know that the learning curve is steep at the beginning. To become familiar with the process, we offer ongoing trainings for all members of the aeoon family.
